EDUCATION

Boston College, Newton, MA

May 2027

Bachelor of Arts in Computer Science, Minors in Finance and Philosophy

- Cumulative GPA: 3.7/4.0
- Activities: 4Boston Volunteering, Computer Science Society, South Asian Association, Intramural Flag Football
- Relevant Coursework: Computer Networks, Randomness, Logic, Operations Research, Computer Systems

Gilman School, Baltimore, MD

May 2023

- Honors & Awards: American Computer Science League Finalist, President's Volunteer Service Award
- Activities: American Computer Science League, South Asian Association, Lunches for the Homeless, Climbing

EXPERIENCE

Northrop Grumman, Annapolis, MD

June 2026 - Present

Software Engineer Intern, Mission Systems

- Built a Python tool using an LLM API to translate natural-language scenario descriptions into structured JSON parameters, populating a custom AFSIM template to auto-generate and run simulation scenarios
- Cut manual scenario setup time significantly by replacing hand-coded AFSIM scripting with a conversational terminal interface, working independently end-to-end

Northrop Grumman, Annapolis, MD

June 2025 - Aug 2025

Systems Engineer Intern

- Designed and implemented a data pipeline using Telegraf and PostgreSQL, and built a Grafana dashboard for real-time visualization
- Simulated sensor activity by generating mock protobuf data in Python to validate pipeline functionality

Recreation and Parks, Howard County, MD

June 2024 - Aug 2024

Camp Leader

- Coordinated camp activities with the counseling team and instructed children aged 6-13 in kayaking, canoeing, archery, and fishing

PROJECTS

Asteroid Miner (Roblox Game) - Product Lead / Game Developer

June 2026 - Present

<https://krishkalra19.github.io/#asteroid-miner>

- Leading a 4-person team building a Roblox space-mining game in Lua; own the home base, tycoon economy, and server-authoritative fuel systems
- Refocused a ~20-system sandbox on one core mining-run loop, cutting features that didn't serve it after an economy audit showed passive income out-earned active play
- Ran competitive playtesting of comparable Roblox tycoon games to inform feature prioritization and team roadmap decisions

Vivarium - Ecosystem & Arena Simulator

September 2026

<https://krishkalra19.github.io/vivarium/>

- Built a browser ecosystem simulator in JavaScript and Three.js where population cycles and extinctions emerge from up to ~1,900 individual animals with heritable genomes
- Wrote a deterministic, seeded match engine that runs headlessly in Node to compute pre-match odds from 200 simulated matches and auto-tune game balance

ISFL Football GM - Game Development

May 2023 - August 2026

<https://krishkalra19.github.io/isfl-football-sim/>

- Designed and developed a football team management simulation in Java where players manage the salary cap, contracts, draft picks, and player aging to build a contender
- Rebuilt it as a React web app, adding draft scouting, trades, injuries, a playoff bracket, and a Hall of Fame

SKILLS

Programming Languages: Python, Java, JavaScript, SQL, Lua

Frameworks: React, Three.js, Node.js

Software: Claude Code, MCP, Roblox Studio, Git, LaTeX, Ollama, Vim
